GENERAL INFORMATION

Evergreen® Viva Turf paint is designed for the long term coloration of dormant and discolored grasses for use on all types of athletic fields, golf courses, and municipal/industrial lawns. Evergreen Viva Turf Paint is an environmentally conscious green pigmented formulation that will not harm the turf and is resistant to fading from ultraviolet light. Reduced maintenance and input costs as well as reduced irrigation requirements attributed to winter over-seeding can be achieved with the application of Evergreen Viva Turf Paint.

DIRECTIONS FOR USE

Preparation and Calibration: Prior to applying Evergreen Viva, cut turf to desired height and remove thatch if needed. Calibrate spray equipment with water to medium coarse spray. To complete the calibration, select a trial area to set the speed of the spray equipment and the amount of liquid used in the trial area. Testing a small area for desired color is recommended.

MIXING: Shake Evergreen Viva container vigorously before diluting with water. Using commercial spray equipment, fill dilution tank to half the desired level and start agitation. Add the correct amount of Evergreen Viva and finish filling the mixing tank. For spot treating with handheld or back-pack tanks, add correct amount of concentrate to half filled tank, finish filling sprayer with water and shake the dilution.

CAUTION: HEALTH HAZARD INFORMATION

Always mix in well ventilated areas. The concentrated form of this material may release ammonia vapors that could produce

APPLICATION RATE INFORMATION

An accepted turf coverage range for one gallon of Evergreen Viva is between 3,000 to 10,000 square feet. The coverage rate will depend upon the height and texture of the turf, the speed and setting of the spray equipment, natural turf color, or color desired. Generally a cross spray pattern on a second application will achieve more uniform turf color. For Divot mix, spray the divot mix while mechanically blending the components to the desired color.

APPLICATION	APPLICATION RATE	SPRAY SOLUTION VOLUME
Dormant Grass	1 gallon; 4 liters	10-15 gallons; 40-60 liters
Dormant Grass (spot treatment)	8-14 oz; 250-425 ml	1 gallon; 4 liters
Divot Mix (sand or clay)	1 gallon; 4 liters	3 gallons; 12 liters

irritation upon contact with eyes or respiratory passages. Repeated skin contact may produce skin rashes or irritation. Wash hands thoroughly with soap and water after using, and in case of contact with eyes, flush eyes for 15 minutes with water. Seek medical attention if irritation persists. If ingestion occurs, consult physician.

EVERGREEN VIVA TURF PAINT

- For professional use only.
- Shake well before using and keep from freezing.
- Avoid application on windy days, wet conditions, as well as temperatures below 40°F.
- Calibrate spray equipment to maximize the product for even turf coverage.
- Avoid over dilution of concentrate above a 1 to 20 ratio of pigment to water.
- Permanent staining will occur on non-turf areas such as skin, clothing, side walks, various surfaces of buildings, edging, and ornamentals. Rinse immediately before drying occurs.
- Allow sufficient drying time before use of turf to prevent transfer of color.

KEEP OUT OF REACH OF CHILDREN

STORAGE AND HANDLING

Store in original and closed container. Do not reuse empty container. Protect product from freezing. If product freezes, warm to room temperature and agitate well before use. Triple rinse (or equivalent) container after use and disposal must be in accordance with all federal, state and local regulations.
